BOOK SYNOPSIS

Applies and modifies Maitland techniques to neural mobilization, refining and improving practical skills for clinical physiotherapists and physically-based occupational therapists. The text outlines the concept of neurodynamics and the basic mechanisms in movement of the nervous system and describes what can go wrong. Causal mechanisms are linked to diagnosis and treatment of pain and musculoskeletal problems in a systematic way. Various treatment techniques for each diagnostic category are presented and applied to specific clinical problems such as neck pain, headache, tennis elbow, carpal tunnel syndrome, low back pain to name a few. These are common problems in which therapists often miss a neural component.
